

Nicor Gas Energy Efficiency Program - Plan Year 2022

APPENDIX B

Quarterly Report: Third Quarter (July 1, 2022 - September 30, 2022)

Response to Evaluators' Recommendations

Program	PY	Recommendation	Action Completion Date	Action(s) Taken
HER	2021	In future program years, the implementer should adjust their ex ante savings estimates for persistence and, if possible, uplift. The persistence adjustment has the bigger impact, particularly the longer a wave has been in place.	9/22/2022	For the current plan cycle, Nicor Gas selected a new program implementer for this program and it is part of the QA/QC process now to share methodology with Guidehouse.
HER	2021	The implementer should share their ex ante estimation methodology for Guidehouse to review to determine whether differences in the method are causing the difference in savings before the adjustments for uplift and persistence.	9/22/2022	For the current plan cycle, Nicor Gas selected a new program implementer for this program and it is part of the QA/QC process now to share methodology with Guidehouse.
RNC	2021	Measure: Furnace Consistently confirm the input values used in ex ante savings calculations are accurate and provided as input values in the tracking data.	8/15/2022	Nicor Gas has additional QA/QC checks to ensure correct input values are used and tracked for ex ante calculations.
RNC	2021	Measure: Advanced Thermostat Base ex ante calculations on the current year TRM and check for TRM Errata prior to year-end.	8/15/2022	Nicor Gas updated the ex ante calculations as per recommendation.
RNC	2021	Measure: Advanced Thermostat Ensure that savings for only one thermostat is claimed per home, consistent with the TRM savings methodology.	8/15/2022	Nicor Gas has additional QA/QC checks to ensure only one thermostat is claimed per home.
